

Ensure screenprint evidence is included of all tests and that the screenprints are readable and referenced to the test. If the actual results column is not wide enough to clearly show the results include them underneath the table clearly references to the test

Interface testing

Do not carry out any testing other than that specified in the activity
Delete rows as required

Test No	Type of test (N, R, X)	Test data	Expected results	Add screenprint(s) of the results of this test (and any retests) Ensure you show the test data used in the screenprint(s)	Only complete this column if the results are not as expected Explain the error If you correct the error explain how you have done it including screenprint(s)
1	R	DonorID: Automatically generated as AutoNumber Surname: Email: harley.d@gmail.com Learners are expected to specify the exact data that will be used	An error message to appear saying surname and email have to be present Learners are expected to know exactly what should happen. General “an error message will display” is not enough.	 <p>The screenshot shows the 'Add a Donor' form with fields for DonorID (55), Surname (empty), and Email (harley.d@gmail.com). A 'Save' button is present. Below the form, a 'Microsoft Access' dialog box displays the error message: 'You must enter a surname and a valid email address' with an 'OK' button.</p> <p>Need to be able to see the actual data being used and the error mesasge</p>	Learners should not add any comments unless something goes wrong. If something goes wrong and they can correct then they should explain the error and show how it has been ameneded including a screenprint of it working. If something goes wrong and they cannot correct they will get better marks if they can explain the error rather than just saying it did not work. If everything is working as it should be (usability and scenario) then learners are not penalised for not having any errors. They should be discouraged from introducing errors just to have something in this column.
2	R	DonorID: Automatically generated as AutoNumber Surname: Davidson Email:	An error message to appear saying surname and email have to be present Note, the test is that a record will not save in the donor table without a donor’s email address. It is not a test of the format of the email address. It would clearly indicate that it is to test the format of the email address if that is what is required. Learners must only test what they are being asked to test.	 <p>The screenshot shows the 'Add a Donor' form with fields for DonorID (56), Surname (Davidson), and Email (empty). A 'Save' button is present. Below the form, a 'Microsoft Access' dialog box displays the error message: 'You must enter a surname and a valid email address' with an 'OK' button.</p>
